

Affordable integrated business software from Software Optima

KUCHING: Small and medium enterprises (SMEs) in Sarawak will now be able to invest in affordable integrated business software to help manage their business operations more efficiently and effectively.

Software Optima Sdn Bhd (SOSB) in a press statement yesterday said SMEs in Sarawak are faced with different kind of challenges in view of the relatively small population in the State.

It said SMEs in Sarawak, who do not export their products and services beyond the State are faced with limited market which may impact their ability to grow.

However, the company foresees that SMEs have the desire to have efficiencies and visibility in their operations but require investments in tools and skills.

SOSB said such tools will obviously in the form of an integrated and well proven business software.

It added that Financial Information Systems (FIS), which is an integrated business software, enables companies to empower their employees to contribute business efficiencies by streamlining and integrating various key business processes into one complete information and interactive service platform for accurate and quick decision making.

FIS is an affordable, ready-made integrated business software which can be deployed for immediate implementation.

The existence of FIS engine means that the software is able to be customised to meet specific needs of different companies.

FIS comprises of 14 modules which provide support to core business

operations of any companies.

The modules are General Ledger System, Account Receivable Systems, Account Payable Systems, Cash Management Systems, Budgetary Control System, Inventory Management System, Deposit Monitoring System, Fixed Asset Management System, Purchasing System, Human Resource Management System, Employee Time Attendance System, Payroll Management System, Loan System and Sales and Distribution.

SOSB added that one of the many advantages when using FIS is that it caters for multi-users as well as multi-companies.

FIS makes it easier for data integration across different users and companies.

Other features include comprehensive security system, secure data management, preview and export features, comprehensive search utilities, flexible integration between modules and real-time account posting.

FIS is an integrated business software which uses Microsoft SQL Server database and adopts an award winning open client-server development tools that are integrated with industry standard such as Web Services, ODBS and XML.

The product is positioned to enable medium size companies and businesses to grow.

It has the capacity to support up to 1,000 users while the Payroll is compliant with the Malaysian payroll system, tax and statutory requirements.
